

## **JOB DESCRIPTION**

<b>Job Description Number:</b>	<b>TBC</b>
<b>Job Title:</b>	Senior Mechanical Design Engineer
<b>Reports To:</b>	Team Leader Mechanical (Functional) & Project Engineer
<b>Based:</b>	Swindon
<b>Responsible For (Appointments under Direct Control of this Job):</b>	allocated Mechanical Design Engineers
<b>External Contacts</b>	Suppliers, Clients

### **Purpose:**

To be the lead Mechanical Design Engineer to produce optimised engineering solutions on allocated projects and provide wider support to the Mechanical Team Leader.

### **Key Responsibilities and Accountabilities**

- Interpretation of customer requirements, including Validation and Verification activities.
- Pre-FEED tasks, including design plant layout and schematic drawings, to support sales and projects.
- Conduct FEED studies for projects to create optimal technical solution.
- Development of project Basis of Design.
- Provide input into project planning and execution.
- Identification and management interfaces, both customer and internal.
- Author and approval of Functional Design Specifications for System, Sub-system and Components for procurement.
- Produce and approve detailed engineering and manufacturing drawings.
- Ownership and management of allocated Work Packages, including time-management and budget control.
- Participate and present material at formal design reviews.
- Participate in Hazard Studies, including HAZOP and carry out design FMEAs.
- Writing / contributing to Installation, Operation & Maintenance Manuals.
- Ensuring conformance to applicable engineering codes and standards as well as company QA system, policies and procedures.
- Continuously develop, improve and implement design procedures.

### **Role Requirements:**

#### **Qualifications/Education**

- Degree-qualified or equivalent in Mechanical Engineering or a related discipline
- Chartered Engineer or working towards chartership.

**Experience:**

- Demonstrable experience of special purpose machinery design.
- Proven ability to support designs with appropriate calculations.
- Experience of high temperature industrial processes and associated equipment is desirable but not essential.
- Industrial experience in Mechanical Engineering.

**Skills:**

- Working knowledge of 2D and 3D CAD software essential, AutoCAD Inventor preferred.
- Good working knowledge of MS Software (Word, Excel, Outlook).
- Excellent interpersonal and communication skills (written and oral).
- Some electrical and controls knowledge would be preferable.
- Strong leader with good communications skill and management skills.

**Attributes:**

- Ability to work both independently and as part of a multi-disciplinary team.
- Must be self-motivated and driven to achieve set goals when working under pressure and with limited resources.
- Demonstrate creativity and experience across the design lifecycle including undertaking requirements capture, concept generation, development and down selection.
- Travelling and working at customers' and suppliers' sites is an integral part of the role and the ideal candidate would will have no restrictions that would interfere with worldwide travel.
- Team working, communication skills, technical support to other departments, ability to work independently if necessary.
- Deal effectively with ambiguity and multiple problems whilst working to tight timescales.
- Ability to achieve set goals when working under pressure and with limited resources.
- Ability to work on own initiative.
- Enthusiastic team contributor.
